

IllumaView™

Natural Light System

Patio Covers and Room Enclosures can now be enhanced with our new IllumaView™ natural light system. Our patented IllumaView™ natural light system is a translucent panel that easily attaches to our insulated LRP's utilizing the same patented locking mechanism, which makes it simple and easy to install with no additional training or assembly required.

Lightweight and Strong

IllumaView™ is constructed out of a tough, multi-wall polycarbonate material that is virtually unbreakable. The panels are lightweight, self supporting, and do not require the extensive structural support that heavier glass panels would need. Compared to glass, they are approximately 1/8th the weight.

Additionally, it is thermally efficient, providing as much as 60% more thermal insulation than glass.

UV Protection

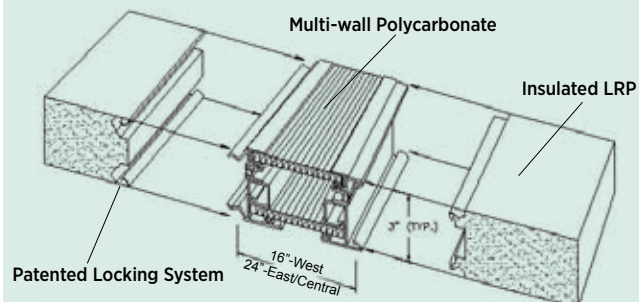

Multi-wall polycarbonate is the most versatile structured thermoplastic available today. A co-extruded protective layer guarantees the

highest stability against the harsh effects of the sun's rays and the multi-walled design gives a stable weathering surface. IllumaView™ offers optimal light transmission of up to 83% with a positive light diffusion due to the rib structure of the panels that limit the damaging effects of UV light.

Warranty

The polycarbonate is warranted for 10 years against yellowing, aging, and damage from hailstones.

USA-East & Central Regions

- Standard width is 24"
- 12" & 16" widths available as special order, longer lead times apply
- Interlocks with the 3" Pro-Fab insulated LRP
- Florida Product Approval #FL10013

Specifications

- Pre-assembled with normal manufacturing lead-times
- Available lengths: 8'-0 to 24'-0
- White edge extrusions
- Poly-carbonate is translucent white opaque
- Installs as quick as a normal LRP, no field assembly required
- Fully engineered to meet IBC, IRC and Florida Building Codes

USA-Western Regions

- Standard width is 16"
- Interlocks with the 3" Solar X insulated LRP
